## CHAPTER 7.0: DROUGHT RESPONSE INFORMATION, ACTIVITIES AND RECOMMENDATION

This chapter presents information on drought management and Drought Contingency Plans, as well as a summary of information provided by water systems in the Lower Colorado Regional Water Planning Area regarding drought management, including preparations and response throughout the Region.

### Drought Definitions

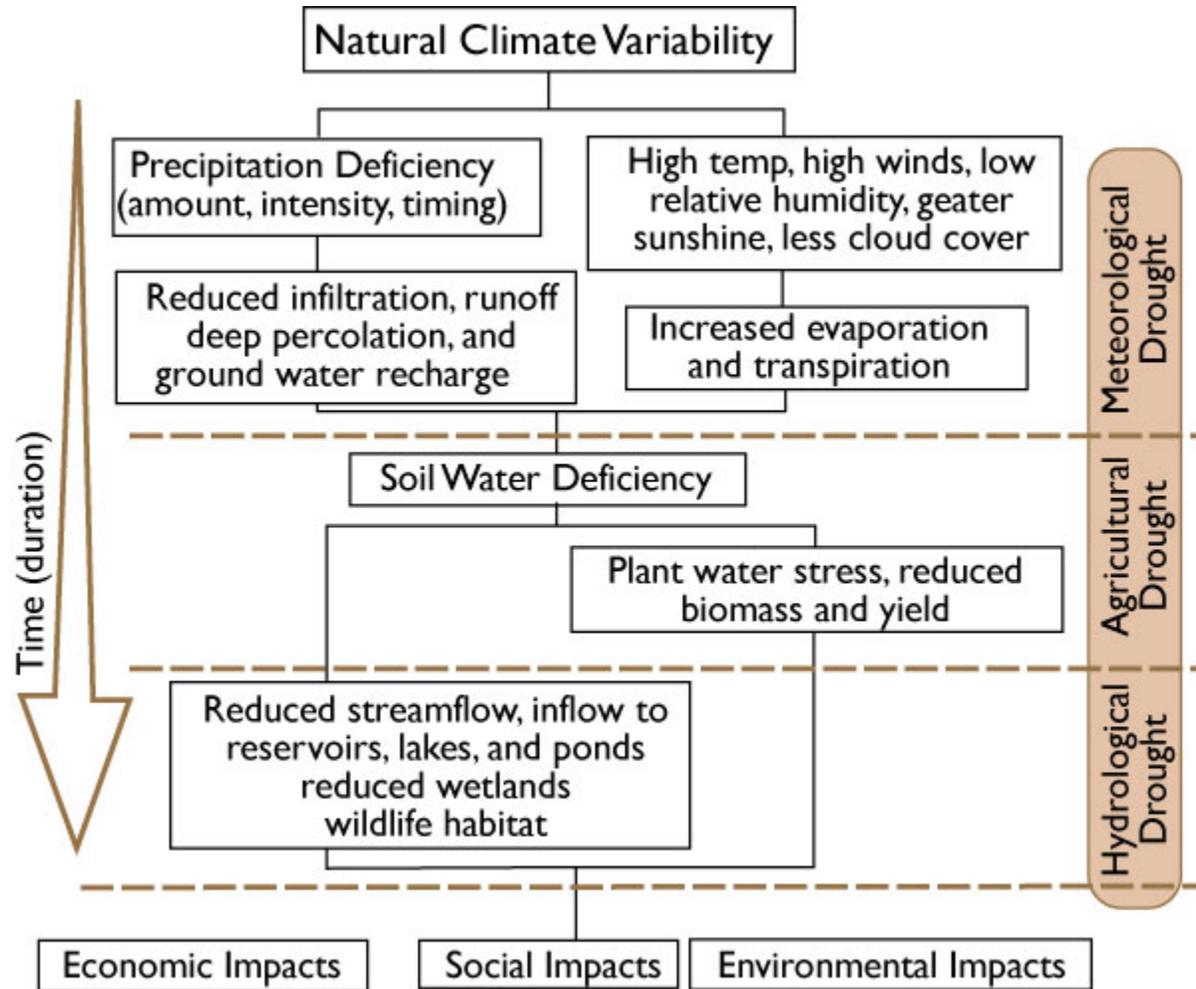

Drought is often referred to as a slow-moving emergency. The impact of droughts can be far-reaching but can be challenging to define due to the gradual and sometimes subtle progression of severity, as well as the tendency for temporal and geographic variations such as isolated rain events to shift perception of the drought severity. The types of droughts are sometimes characterized as meteorological, agricultural, and hydrological, which are events leading to the recognized socioeconomic impacts of drought. These drought terms are integrated and ordered such that as one type of drought intensifies it may lead to the development of another category of drought. The following definitions of categories of drought are taken from the State of Texas Drought Preparedness Plan and are further reflected in *Figure 7.1*:

- A meteorological drought is often defined as a period of substantially diminished precipitation duration and/or intensity that persists long enough to produce a significant hydrologic imbalance. The commonly used definition of meteorological drought is an interval of time, generally of the order of months or years, during which the actual moisture supply (typically rainfall in this region) of a given place consistently falls below the average moisture supply or average rainfall amount.
- Agricultural drought occurs when there is inadequate precipitation and/or soil moisture to sustain crop or forage production systems. The water deficit results in serious damage and economic loss to plant or animal agriculture. Agricultural drought usually begins after meteorological drought but before hydrological drought and can also affect livestock and other agricultural operations.
- Hydrological drought refers to reductions in surface and groundwater water supplies. It is measured as streamflow, and as lake, reservoir, and groundwater levels. There is usually a time lag between a lack of rain and lower amounts of measurable water in streams, lakes, and reservoirs.
- Socioeconomic drought occurs when physical water shortages start to affect the health, well-being, and quality of life of the people, or when the drought starts to affect the supply and demand of an economic product.

Determining if a dry weather pattern substantiates a meteorological drought requires an area-specific analysis that is first typically signified by dry meteorological patterns. Short intervals of dry patterns are considered within the norm of meteorological variation (seasonally and annually) so it is important to note that a true meteorological drought is dependent on the area in which it occurs.

In areas where surface and/or groundwater supplies are full at the start of a dry pattern, there is often minimal impact on water use or economic and agricultural activity. However, as dry pattern intensities deepen and duration of the meteorological drought continues and water supplies are stressed, the impacts of meteorological drought transition and begin to indicate other drought categories.

Figure 7.1: Categories of Drought and Natural Climate Variability

Source: National Drought Mitigation Center website "What is Drought?"

### 7.1 DROUGHT OF RECORD

The definition of Drought of Record is “the period of time when historical records indicate that natural hydrological conditions would have provided the least amount of water supply,” per TAC Title 31, Part 10, Chapter 357, Subchapter A, Rule 357.10.

Hydrological droughts can be assessed using the Texas Commission on Environmental Quality (TCEQ) Water Availability Model (WAM); this assessment is directly associated with the use of the WAM model to determine firm availability of surface water for the Regional Water Plan.

Another indicator commonly used by federal and state agencies to characterize drought severity is the Palmer Drought Severity Index (PDSI). The PDSI is an estimate of soil moisture conditions calculated based on precipitation and temperature. The PDSI classifies soil moisture on a scale ranging from

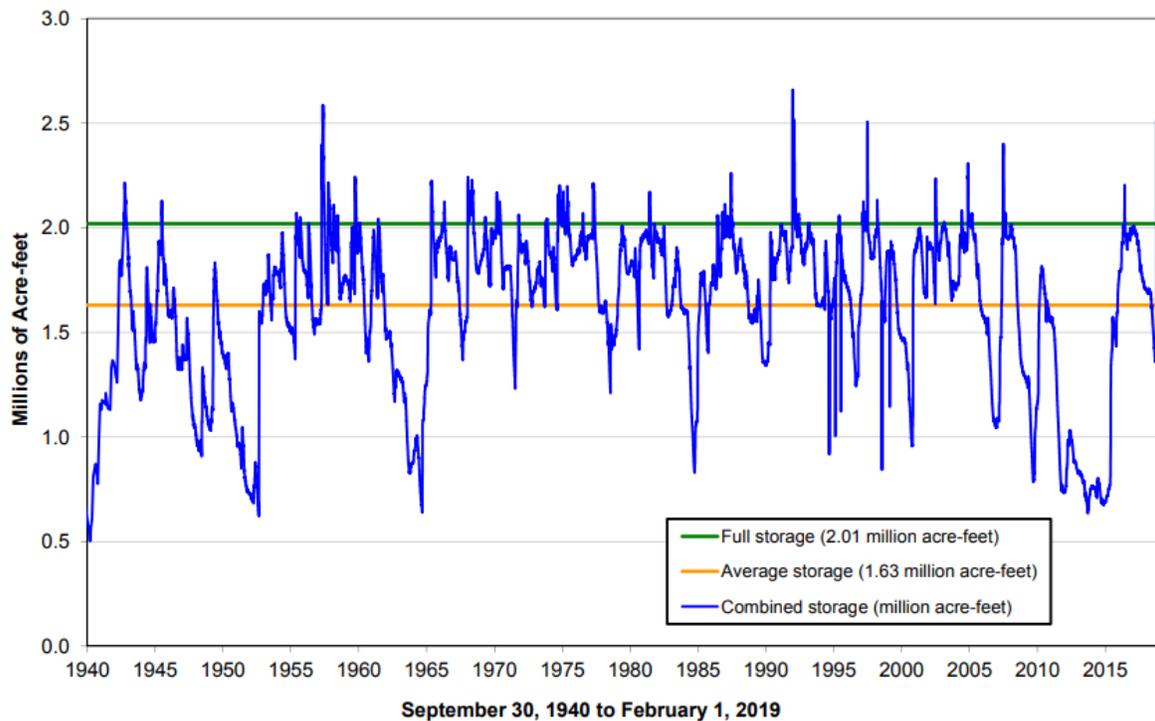

approximately -6.0 to 6.0, with values of approximately -0.49 to 0.49 reflecting normal conditions and -4.0 or lower representing extreme drought.

**7.1.1 Drought of Record**

Statewide, the period typically considered the Drought of Record occurred in the 1950s and had significant hydrologic and economic consequences throughout the State. Within the Lower Colorado Regional Planning Area, the Drought of Record is most specifically associated with the hydrologic conditions of the Highland Lakes. The current Drought of Record for the Highland Lakes began in October 2007 and lasted through December 2016. Modeling efforts confirm that 2011 represents the worst single-year drought on record, or the dry year of the Colorado River basin. The previous Drought of Record began in May 1947 and lasted through April 1957. During this time, the Highland Lakes reached a lowest combined storage of 621,221 acre-feet on September 9, 1952.

Due to schedule requirements of the current regional plan development process, the planning group was able to extend the hydrologic data set used for the plan’s surface water availability analysis through the end of 2016. However, since the full and final 2017 data sets were not yet available, analysis of any additional drought data through 2017 and beyond will need to be conducted for future planning analyses. The 5-year frequency of the regional planning cycles provides the opportunity on a regular basis to update the analyses that go into developing the plan. The 2007 to 2016 Drought of Record resulted in persistently low lake levels from 2011 to mid-2015. As of December 2019, lake storage is at 87%. *Figure 7.2* shows how the combined storage in the last several years compares to historical storage levels dating back to 1940, when the lakes were built.

**Figure 7.2: Total Combined Storage Levels of Lakes Buchanan and Travis**

## 7.2 CURRENT DROUGHT PREPARATIONS AND RESPONSE

The TCEQ, in accordance with the Texas Administrative Code (TAC), requires all wholesale public water suppliers, retail public supplier, and irrigation districts to prepare and submit Drought Contingency Plans (DCPs) meeting the requirements of 30 TAC Chapter§288(b) and to update these plans at least every five years.

While drought may be considered an emergency, it is often a slowly developing situation that provides increasing signs that water supplies could become scarce. By contrast, some supply deficiencies, such as equipment or pipeline failures, happen on shorter time intervals and provide little or no advance warning. System limitations that result from unexpected events including equipment failures, water supply contaminations, and other sudden decrease of supply should be planned for just as other emergency events. It is also important for communities to be aware that loss of supply may be a result of intentional damage or attack on a system.

The recent drought provided many water systems in the region with the opportunity to experience implementation of their Drought Contingency Plans. That real-world experience has helped shaped updates to their Drought Contingency Plans. Outdoor watering restrictions are a common method of reducing water use and are now being suggested as voluntary measures for several months a year in various water systems in the region. This effort prepares customers for anticipated water restrictions during periods of drought.

The Drought Contingency Plans show that a variety of triggers have been specified by the different water suppliers as initiators of water shortage conditions. These triggers include a threshold level of total water use, well levels, and conditions caused by mechanical failure of water service systems. Strategies planned for dealing with drought conditions included restrictions on water use for irrigation, vehicle washing, and construction. The amount of water saved for each drought response conditions varied by community.

*Appendix 7A* provides the drought triggers for severe and critical/emergency water shortages for water users in the region, as available from the Drought Contingency Plans. The water reduction goals for the triggers are also included.

## 7.3 EXISTING AND POTENTIAL EMERGENCY INTERCONNECTS

The Texas Administrative Code (31 TAC 357.42(d)) states that the regional water planning groups will collect confidential information on infrastructure and submit the information to the Executive Administrator of the Texas Water Development Board in accordance with the guidance provided.

The guidance provided by the Texas Water Development Board states that “RWPGs shall collect and summarize information on existing major water infrastructure facilities that may be used for emergency interconnects and provide this information to the EA confidentially and separately from the final adopted RWP...This information may be collected in a tabular format that shows the potential user(s) of the interconnect(s), the potential supplier(s), the estimated potential volume of supply that could be provided via the interconnect (including the source name), and a general description of the facility/infrastructure and its location.”

During the previous planning cycle, the Region K Drought Committee determined that a low number of responses would be expected if the planning group sent a letter requesting emergency interconnect data. Instead of a letter/survey, the Region K consultant submitted an information request to the TCEQ for

information on emergency interconnects within the counties in Region K. After repeating the process for the new cycle, the TCEQ provided an Excel spreadsheet containing data on the potential user of the interconnect, the potential supplier, source information, and contact information. *Table 7.1* shows emergency interconnects for 19 WUGs within Region K; although the submitted information included 38 existing and potential interconnects, some of the sellers or recipients were private or non-WUGs and are not included in the table. Information on existing and potential interconnect supply capacity and details related to location were not available. The confidential information was provided electronically, along with a transmittal letter, to the Executive Administrator prior to March 1, 2020.

**Table 7.1: Existing and Potential Emergency Interconnects**

Water User Group Recipient	Water User Group Seller	Supply Source
La Grange	Fayette WSC	GW
Fayette County WCID Monument Hill	Fayette WSC	GW
Fayette WSC	La Grange	GW
Fayette WSC	Fayette County WCID Monument Hill	GW
Manor	Austin	SW
Lakeway MUD	Travis County WCID 17	SW
Travis County WCID 17	Lakeway MUD	SW
Hurst Creek MUD	Lakeway MUD	SW
Hurst Creek MUD	Travis County WCID 17	SW
Travis County WCID 20	Travis County MUD 4	SW
Travis County WCID 20	West Travis County Public Utility Agency	SW
West Travis County Public Utility Agency	Travis County WCID 17	SW
Travis County MUD 4	Travis County WCID 20	SW
Georgetown	Round Rock	SW
Georgetown	Jonah Water SUD (Region G)	SW
Leander	Cedar Park	SW
Jonah Water SUD (Region G)	Georgetown	SW
Brushy Creek MUD	Round Rock	SW
Williamson County WSID 3	Round Rock	SW

Additionally, available DCPs for entities within the Region were reviewed to identify establishment or activation of interconnects as a drought response. The following entities have Drought Contingency Plans that mention the possibility of establishing or activating emergency interconnects as a drought response: Brookesmith SUD, Creedmoor-Maha WSC, Deer Creek Ranch, Fayette County WCID Monument Hill, Hays, Horseshoe Bay, Hurst Creek MUD, Lago Vista, Lakeway MUD, Leander, Travis County MUD 10, and Travis County WCID 17.

## 7.4 EMERGENCY RESPONSES TO LOCAL DROUGHT CONDITIONS OR LOSS OF MUNICIPAL SUPPLY

Emergency preparedness is of particular importance for entities that rely on a sole-source of water for supply purposes. In instances where water systems rely exclusively on a single source, the State of Texas has identified a need to develop emergency preparedness protocols should a source's availability be significantly and suddenly reduced for any reason, including drought, equipment failure, or accidental or deliberate source contamination.

### 7.4.1 WUGs with 2010 Population less than 7,500 and with a sole-source of water<sup>1</sup>

The Texas Administrative Code (31 TAC §357.42) requires that regional planning groups evaluate potential emergency responses to drought conditions or loss of existing water supplies for municipal water user groups with a population of less than 7,500 and with a sole-source of water, as well as all county-other water user groups. For these emergency responses to local drought conditions or loss of municipal supply, the WUGs were assumed to have 180 days or less of remaining supply.

A list of identified single-source municipal Water User Groups with population less than 7,500 and with a sole-source of water is provided in *Table 7.2* on the next page. The table also lists potential emergency water supply options for each Water User Group.

### 7.4.2 County-Other WUGs

*Table 7.3* on the following pages provides the list of County-Other Water User Groups in Region K, and their potential emergency water supply options. For these emergency responses to local drought conditions or loss of municipal supply, the WUGs were assumed to have 180 days or less of remaining supply.

---

<sup>1</sup> Information in this subsection was obtained from the Texas Administrative Code, specifically TAC Title 30, Part 1, Chapter 288, Subchapter A, Rule 288.2.0

**7.5 REGION-SPECIFIC DROUGHT RESPONSE RECOMMENDATIONS AND MODEL DROUGHT CONTINGENCY PLANS**

**7.5.1 Surface Water**

The Highland Lakes and Colorado River provide substantial water supply to the Lower Colorado Region, and almost exclusively provide the primary source water for a number of Central Texas municipal utilities, including Austin (Austin Water). The Lower Colorado River Authority manages the Highland Lakes and closely monitors total combined storage in the lakes and establishes drought stages based on combined storage levels. *Table 7.4* below summarizes recommended drought stage triggers and actions as identified in the LCRA’s DCP for Firm Water Customers. LCRA requires all customers to submit drought contingency plans (DCPs) stating the specific combined storage triggers located in its water management plan and requires customers to update their plans every five years. Austin also follows Drought Contingency Plan triggers based on the combined storage levels in the Highland Lakes, as well as other triggers based on peak day system demand.

**Table 7.4: Summary of LCRA Recommended Drought Triggers and Responses**

<b>Drought Stage</b>	<b>Trigger</b>	<b>Action</b>
<b>Stage 1</b>	Combined Storage less than 1.4 million acre-feet and interruptible stored water is being curtailed	5% reduction by customers
<b>Stage 2</b>	Combined Storage less than 900,000 acre-feet and interruptible stored water is being curtailed	10-20% reduction by customers  LCRA will implement an aggressive public information campaign
<b>Stage 3</b>	LCRA Board of Directors declares a Drought Worse than the Drought of Record	Minimum 20% reduction by customers and encouragement to use alternative supplies  All uses of interruptible stored water will be cut off.
<b>Stage 4</b>	LCRA Board determines that conditions constitute a water supply emergency	Determined by LCRA Board.  Encourage customers to use alternative water supplies

Based on LCRA Drought Contingency Plan for Firm Water Customers, February 2019.

The Lower Colorado Regional Water Planning Group (LCRWPG) acknowledges that the Major Water Providers in Region K have extensive knowledge regarding surface water sources in the region, and they may play a leadership role in developing appropriate drought response actions for themselves and their customers. Please see *Appendix 7A* for severe and critical/emergency triggers and responses associated with the surface water customers of the Major Water Providers in the region. One area the LCRWPG feels could potentially be improved upon is the coordination and uniformity of Drought Stage levels for all users of a particular source. It has been acknowledged that there can be some confusion when two

water users of the same water source are at different Drought Stage levels, even if they are implementing similar drought responses. No unnecessary or counterproductive variations in specific drought response strategies among user groups in Region K were identified that may confuse the public or otherwise impede drought response efforts.

### 7.5.2 Groundwater

A large portion of the region uses groundwater as their main source of supply. Throughout the region, the Drought Contingency Plans for groundwater users are developed specifically to their use and location. Aquifer characteristics can vary across the region and it can be difficult to require the same triggers for all users of a particular groundwater source that covers several counties. The LCRWPG acknowledges that the municipalities and water utilities that rely upon groundwater should have the best knowledge to develop their Drought Contingency Plan triggers and responses using their specialized knowledge. Please see *Appendix 7A* for severe and critical/emergency triggers and responses associated with groundwater users in the region. Even so, the LCRWPG encourages ongoing coordination between groundwater users, Groundwater Conservation Districts, and the Groundwater Management Areas to monitor local conditions for necessary modifications to the Drought Contingency Plans.

Several resources are available to aid in drought monitoring. The following sources provide information related to drought that groundwater suppliers, Groundwater Conservation Districts, and Groundwater Management Areas can all use to monitor drought conditions and help aid in making decisions related to triggers and drought response.

Texas Drought Preparedness Council:

<http://www.txdps.state.tx.us/dem/CouncilsCommittees/droughtCouncil/stateDroughtPrepCouncil.htm>

Palmer Drought Severity Index:

<https://www.drought.gov/drought/data/category/pdsi-palmer-drought-severity-index>

TCEQ drought information:

<https://www.tceq.texas.gov/response/drought>

### 7.5.3 Region-Specific Model-Drought Contingency Plans

Model drought contingency plans addressing the requirements of 30 TAC Chapter §288(b) were developed for Region K and are available in *Appendix 7B*. Model plans were developed for wholesale water providers, retail public water suppliers, irrigation water users, and steam-electric water users, based on the recommendations of the Drought Preparedness Council this planning cycle. The recommendation was to include region-specific model drought contingency plans for any water use category that uses 10 percent or more of the region's water demand in any given decade. Other than for steam-electric, these model plans were largely based on templates provided by the TCEQ with modifications made to acknowledge coordination with the Lower Colorado Regional Water Planning Group and to make the template more specific to the region. The TCEQ does not have templates for steam-electric water users, so a model plan was developed using a Drought Contingency Plan from a steam-electric facility in the region as an example.

## 7.6 DROUGHT MANAGEMENT WATER MANAGEMENT STRATEGIES

### 7.6.1 Potentially Feasible Drought Management WMS Considered

The Lower Colorado Regional Water Planning Group considers drought management an integral component of meeting the future water needs of the Region. Although drought management measures are often temporary mechanisms to reduce water consumption and drought impact, it is equally evident that some drought management measures may develop into permanent shifts or reductions in water use practices in the region. The Lower Colorado River Authority and Austin (Austin Water), as well as other smaller water providers throughout the Region, have implemented drought contingency measures largely since 2011. These measures and the subsequent awareness for mindful water use among citizens have become an important part of managing water supplies throughout the Region, particularly in the Highland Lakes.

Drought management as a water management strategy was considered for each municipal WUG, regardless of whether they had water needs. In general, the following guidelines were utilized in considering drought management as a municipal WUG strategy:

- For municipal WUGs with GPCD equal to or less than 100 gallons per capita daily, a 5% demand reduction was recommended.
- For municipal WUGs with GPCD greater than 100 gallons per capita daily, a 20% demand reduction was recommended.
- The demand reduction percentages listed above were modified based on available Drought Contingency Plans for individual WUGs to reflect the utilities' identified goal for reduction during severe drought.
- Consideration was given whether water use restrictions were in place in 2011.

Drought management was also considered as a potentially feasible strategy for several irrigation water user groups with water needs. Irrigation in Colorado, Matagorda, and Wharton counties has severe shortages throughout the planning period, and drought management may be a necessary strategy to implement. Rice farming is prominent in these three counties, and generally involves growing both a first and second (ratoon) crop. Drought management would assume that most rice farmers would grow only a first crop and not a second crop. In addition, drought management is recommended for irrigation in Mills County (Brazos Basin.) There are limited supplies of water in that area of the county, and it is assumed that the water use by agriculture would be reduced based on drought conditions.

### 7.6.2 Recommended Drought Management WMS

Drought management was recommended as a water management strategy for nearly all municipal WUGs that have Region K as their primary region, and for the irrigation WUGs mentioned in *Section 7.6.1*. Triggers associated with these recommended strategies include those referenced in the LCRA Water Management Plan and the individual utility drought contingency plans. The Palmer Drought Severity Index is another resource that could be used for determining triggers for these strategies. Please refer to *Chapter 5* for additional details.

Total water savings for municipal and irrigation-related drought management strategies within the Region reach approximately 83,000 ac-ft/yr by the year 2070, with the largest portion of that coming from municipal utilities.

Other recommended drought-related strategies that may be implemented specifically to help manage extreme drought conditions and extend water supplies include two strategies for Austin (Austin Water). The two Austin strategies include the Indirect Potable Reuse through Lady Bird Lake strategy and the Lake Austin Operations strategy, both discussed more fully, including drought triggers, in *Chapter 5*. In addition, Llano has a recommended strategy for purchasing water that would need to be trucked in. It is acknowledged that this strategy would only be implemented under extreme drought conditions where senior downstream water users divert all of their authorized water. This strategy is discussed in more detail in *Chapter 5*.

### 7.6.3 Alternative Drought Management WMS

There is one alternative strategy for LCRA that would likely be implemented only during times of drought. This is the Supplement Bay and Estuary Inflows with Brackish Groundwater strategy, discussed in *Chapter 5*.

## 7.7 OTHER DROUGHT RECOMMENDATIONS

Housed within the Office of Emergency Management within the Texas Department of Public Safety, the Drought Preparedness Council was authorized and established by the 76<sup>th</sup> legislature (HB-2660) in 1999, subsequent to the establishment of the Drought Monitoring and Response Committee (75<sup>th</sup> legislature, SB1.) The Council is composed of representatives of state agencies and appointees by the governor. As defined by the Texas Water Code, the Council is responsible for the monitoring and assessing drought conditions and advising elected and planning officials about drought-related topics.

During the 2021 cycle, the Lower Colorado Regional Water Planning Group (LCRWPG) reviewed and considered recommendations from the Drought Preparedness Council with regards to developing region-specific model drought contingency plans for water use categories in the region with more than 10 percent of water demands, as well as following the outline template provided by the Texas Water Development Board, making an effort to fully address the assessment of current drought preparations, as well as planned responses to local drought conditions or loss of municipal supply. The LCRWPG recommended conservation and drought management as water management strategies for municipal water user groups, which will aid in buffering any unanticipated population growth.

The Lower Colorado Regional Water Planning Group recognizes that the most valuable contingency will be completed at a local level. Further guidance and regional cooperation would be valuable in producing meaningful plans with clear trigger definition and implementation guidance. Communication of these between state, regional, and local levels would also further facilitate necessary emergency responses when drought measures need to be implemented. The following recommendations are made to support development and implementation of meaningful Drought Contingency Plans during times of drought:

- Uniform consistency of drought stage definition among users of the same source of water.
- Coordination by water providers with local Groundwater Conservation Districts, in order to consider more uniform triggers and responses from a particular source within the district, as applicable.

- Coordination with wholesale providers regarding drought conditions and potential implementation of drought stages.
- Communication with customers upon reaching a voluntary drought stage level to raise public awareness and facilitate potential implementation of drought measures.
- Communication with customers upon reaching a mandatory drought stage level to reinforce the importance of compliance with mandatory drought measures and emphasize heightened need for public awareness.

*APPENDIX 7A*

*EXISTING DROUGHT TRIGGERS AND REDUCTION GOALS*

WUG Name	County	Source Name	Severe Water Shortage		Critical/Emergency Water Shortage	
			Trigger	Goal	Trigger	Goal
BARTON CREEK WEST WSC	TRAVIS	HIGHLAND LAKES	Either of the following criteria is met: a. For surface water supply systems, when total daily water demand equals or exceeds 85% of: a. the total design capacity of a WTCPUA water treatment plant for three consecutive days; or b. The LCRA Board determines a drought worse than the drought of record.	Minimum 20% reduction in use	Include, but are not limited to, the following: a. Major water line breaks, loss of distribution pressure, or pump system failures that cause substantial loss in its ability to provide water service, b. Contamination of the water supply source, c. Any other emergency water supply or demand conditions that the WTCPUA Water Services executive manager, or designee, determines to constitute a water supply emergency more severe than that contemplated in the triggers contained in the LCRA Water Management Plan	As determined by the WTCPUA Board.
BARTON CREEK WSC	TRAVIS	HIGHLAND LAKES	The District will declare that a severe water shortage condition exists when average daily water consumption reaches 95% of production/distribution capacity for a period of 3 days.	25% reduction in demand	The District will declare that an emergency water shortage condition exists when the Board of Directors determine that Stage 4 implementation is necessary pursuant to requirements specified in the District's wholesale water purchase contract with the Lower Colorado River Authority or when the Board of Directors declares that Stage 4 implementation is necessary due to a system outage or catastrophic equipment failure.	Additional pro-rata curtailment in total water use specified by LCRA.

*APPENDIX 7B*  
*REGION-SPECIFIC MODEL DROUGHT CONTINGENCY PLANS*

**THIS PAGE LEFT INTENTIONALLY BLANK**

**Model Region K Drought Contingency Plan Template  
Utility/Water Supplier**

**THIS PAGE LEFT INTENTIONALLY BLANK**

*Model Drought Contingency Plan Template (Utility / Water Supplier)*

***Brief Introduction and Background***

Include information such as

- Name of Utility
- Address, City, Zip Code
- CCN#
- PWS #s

**Section I: Declaration of Policy, Purpose, and Intent**

In order to conserve the available water supply and protect the integrity of water supply facilities, with particular regard for domestic water use, sanitation, and fire protection, and to protect and preserve public health, welfare, and safety and minimize the adverse impacts of water supply shortage or other water supply emergency conditions, the \_\_\_\_\_ (name of your water supplier) hereby adopts the following regulations and restrictions on the delivery and consumption of water through an ordinance/or resolution.

Water uses regulated or prohibited under this Drought Contingency Plan (the Plan) are considered to be non-essential and continuation of such uses during times of water shortage or other emergency water supply condition are deemed to constitute a waste of water which subjects the offender(s) to penalties as defined in Section XI of this Plan.

**Section II: Public Involvement**

Opportunity for the public to provide input into the preparation of the Plan was provided by the \_\_\_\_\_ (name of your water supplier) by means of \_\_\_\_\_ (describe methods used to inform the public about the preparation of the plan and provide opportunities for input; for example, scheduling and providing public notice of a public meeting to accept input on the Plan).

**Section III: Public Education**

The \_\_\_\_\_ (name of your water supplier) will periodically provide the public with information about the Plan, including information about the conditions under which each stage of the Plan is to be initiated or terminated and the drought response measures to be implemented in each stage. This information will be provided by means of \_\_\_\_\_ (describe methods to be used to provide information to the public about the Plan; for example, public events, press releases or utility bill inserts).

**Section IV: Coordination with the Lower Colorado Regional Water Planning Group**

The service area of the \_\_\_\_\_ (name of your water supplier) is located within the Lower Colorado Regional Water Planning Area and \_\_\_\_\_ (name of your water supplier) has provided a copy of this Plan to the Lower Colorado Regional Water Planning Group.

**Section V: Authorization**

The \_\_\_\_\_ (designated official; for example, the mayor, city manager, utility director, general manager, etc.), or his/her designee is hereby authorized and directed to implement the applicable provisions of this Plan upon determination that such implementation is necessary to protect public health, safety, and welfare. The \_\_\_\_\_, (designated official) or his/her designee shall have the authority to initiate or terminate drought or other water supply emergency response measures as described in this Plan.

**Section VI: Application**

The provisions of this Plan shall apply to all persons, customers, and property utilizing water provided by the \_\_\_\_\_ (name of your water supplier). The terms person and customer as used in the Plan include individuals, corporations, partnerships, associations, and all other legal entities.

**Section VII: Definitions**

For the purposes of this Plan, the following definitions shall apply:

Aesthetic water use: water use for ornamental or decorative purposes such as fountains, reflecting pools, and water gardens.

Commercial and institutional water use: water use which is integral to the operations of commercial and non-profit establishments and governmental entities such as retail establishments, hotels and motels, restaurants, and office buildings.

Conservation: those practices, techniques, and technologies that reduce the consumption of water, reduce the loss or waste of water, improve the efficiency in the use of water or increase the recycling and reuse of water so that a supply is conserved and made available for future or alternative uses.

Customer: any person, company, or organization using water supplied by \_\_\_\_\_ (name of your water supplier).

Domestic water use: water use for personal needs or for household or sanitary purposes such as drinking, bathing, heating, cooking, sanitation, or for cleaning a residence, business, industry, or institution.

Even number address: street addresses, box numbers, or rural postal route numbers ending in 0, 2, 4, 6, or 8 and locations without addresses.

Industrial water use: the use of water in processes designed to convert materials of lower value into forms having greater usability and value.

Landscape irrigation use: water used for the irrigation and maintenance of landscaped areas, whether publicly or privately owned, including residential and commercial lawns, gardens, golf courses, parks, and rights-of-way and medians.

Non-essential water use: water uses that are not essential nor required for the protection of public, health, safety, and welfare, including:

- (a) irrigation of landscape areas, including parks, athletic fields, and golf courses, except otherwise provided under this Plan;
- (b) use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle;
- (c) use of water to wash down any sidewalks, walkways, driveways, parking lots, tennis courts, or other hard-surfaced areas;
- (d) use of water to wash down buildings or structures for purposes other than immediate fire protection;
- (e) flushing gutters or permitting water to run or accumulate in any gutter or street;
- (f) use of water to fill, refill, or add to any indoor or outdoor swimming pools or Jacuzzi-type pools;
- (g) use of water in a fountain or pond for aesthetic or scenic purposes except where necessary to support aquatic life;
- (h) failure to repair a controllable leak(s) within a reasonable period after having been given notice directing the repair of such leak(s); and
- (i) use of water from hydrants for construction purposes or any other purposes other than fire fighting.

Odd numbered address: street addresses, box numbers, or rural postal route numbers ending in 1, 3, 5, 7, or 9.

**Section VIII: Criteria for Initiation and Termination of Drought Response Stages**

The \_\_\_\_\_ (designated official) or his/her designee shall monitor water supply and/or demand conditions on a \_\_\_\_\_ (example: daily, weekly, monthly) basis and shall determine when conditions warrant initiation or termination of each stage of the Plan, that is, when the specified triggers are reached.

The triggering criteria described below are based on \_\_\_\_\_

*(provide a brief description of the rationale for the triggering criteria; for example, triggering criteria / trigger levels based on a statistical analysis of the vulnerability of the water source under drought of record conditions, or based on known system capacity limits).*

**Stage 1 Triggers -- MILD Water Shortage Conditions**Requirements for initiation

Customers shall be requested to voluntarily conserve water and adhere to the prescribed restrictions on certain water uses, defined in Section VII Definitions, when

---

*(Describe triggering criteria / trigger levels; see examples below).*

*Following are examples of the types of triggering criteria that might be used in one or more successive stages of a drought contingency plan. One or a combination of such criteria must be defined for each drought response stage, but usually not all will apply. Select those appropriate to your system:*

*Example 1: Annually, beginning on May 1 through September 30.*

*Example 2: When the water supply available to the \_\_\_\_\_ (name of your water supplier) is equal to or less than \_\_\_\_\_ (acre-feet, percentage of storage, etc.).*

*Example 3: When, pursuant to requirements specified in the \_\_\_\_\_ (name of **your** water supplier) wholesale water purchase contract with \_\_\_\_\_ (name of your wholesale water supplier), notification is received requesting initiation of Stage 1 of the Drought Contingency Plan.*

*Example 4: When flows in the \_\_\_\_\_ (name of stream or river) are equal to or less than \_\_\_\_\_ cubic feet per second.*

*Example 5: When the static water level in the \_\_\_\_\_ (name of your water supplier) well(s) is equal to or less than \_\_\_\_\_ feet above/below mean sea level.*

*Example 6: When the specific capacity of the \_\_\_\_\_ (name of your water supplier) well(s) is equal to or less than \_\_\_\_\_ percent of the well's original specific capacity.*

*Example 7: When total daily water demand equals or exceeds \_\_\_\_\_ million gallons for \_\_\_\_\_ consecutive days of \_\_\_\_\_ million gallons on a single day (example: based on the safe operating capacity of water supply facilities).*

*Example 8: Continually falling treated water reservoir levels which do not refill above \_\_\_\_\_ percent overnight (example: based on an evaluation of minimum treated water storage required to avoid system outage).*

*The public water supplier may devise other triggering criteria which are tailored to its system.*

Requirements for termination

Stage 1 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of \_\_\_ (e.g. 3) consecutive days.

**Stage 2 Triggers -- MODERATE Water Shortage Conditions**

Requirements for initiation

Customers shall be required to comply with the requirements and restrictions on certain non-essential water uses provided in Section IX of this Plan when \_\_\_\_\_ (*describe triggering criteria; see examples in Stage 1*).

Requirements for termination

Stage 2 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of \_\_\_ (example: 3) consecutive days. Upon termination of Stage 2, Stage 1 becomes operative.

**Stage 3 Triggers -- SEVERE Water Shortage Conditions**

Requirements for initiation

Customers shall be required to comply with the requirements and restrictions on certain non-essential water uses for Stage 3 of this Plan when \_\_\_\_\_ (*describe triggering criteria; see examples in Stage 1*).

Requirements for termination

Stage 3 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of \_\_\_ (example: 3) consecutive days. Upon termination of Stage 3, Stage 2 becomes operative.

**Stage 4 Triggers -- CRITICAL Water Shortage Conditions**

Requirements for initiation

Customers shall be required to comply with the requirements and restrictions on certain non-essential water uses for Stage 4 of this Plan when \_\_\_\_\_ (*describe triggering criteria; see examples in Stage 1*).

Requirements for termination

Stage 4 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of \_\_\_ (example: 3) consecutive days. Upon termination of Stage 4, Stage 3 becomes operative.

**Stage 5 Triggers -- EMERGENCY Water Shortage Conditions**

Requirements for initiation

Customers shall be required to comply with the requirements and restrictions for Stage 5 of this Plan when \_\_\_\_\_ (designated official), or his/her designee, determines that a water supply emergency exists based on:

1. Major water line breaks, or pump or system failures occur, which cause unprecedented loss of capability to provide water service; **or**

- 2. Natural or man-made contamination of the water supply source(s).

Requirements for termination

Stage 5 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of \_\_\_ (example: 3) consecutive days.

**Stage 6 Triggers -- WATER ALLOCATION**

Requirements for initiation

Customers shall be required to comply with the water allocation plan prescribed in Section IX of this

Plan and comply with the requirements and restrictions for Stage 5 of this Plan when \_\_\_\_\_ (describe triggering criteria, see examples in Stage 1).

Requirements for termination - Water allocation may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of \_\_\_ (example: 3) consecutive days.

*Note: The inclusion of WATER ALLOCATION as part of a drought contingency plan may not be required in all cases. For example, for a given water supplier, an analysis of water supply availability under drought of record conditions may indicate that there is essentially no risk of water supply shortage. Hence, a drought contingency plan for such a water supplier might only address facility capacity limitations and emergency conditions (example: supply source contamination and system capacity limitations).*

**Section IX: Drought Response Stages**

The \_\_\_\_\_ (designated official), or his/her designee, shall monitor water supply and/or demand conditions on a daily basis and, in accordance with the triggering criteria set forth in Section VIII of this Plan, shall determine that a mild, moderate, severe, critical, emergency or water shortage condition exists and shall implement the following notification procedures:

**Notification**

Notification of the Public:

The \_\_\_\_\_ (designated official) or his/ her designee shall notify the public by means of:

- Examples:*
- publication in a newspaper of general circulation,*
- direct mail to each customer,*
- public service announcements,*
- signs posted in public places*
- take-home fliers at schools.*

Additional Notification:

The \_\_\_\_\_ (designated official) or his/ her designee shall notify directly, or cause to be notified directly, the following individuals and entities:

*Examples:*

*Mayor / Chairman and members of the City Council / Utility Board*

*Fire Chief(s)*

*City and/or County Emergency Management Coordinator(s)*

*County Judge & Commissioner(s)*

*State Disaster District / Department of Public Safety*

*TCEQ (required when mandatory restrictions are imposed)*

*Major water users*

*Critical water users, i.e. hospitals*

*Parks / street superintendents & public facilities managers*

*Note: The plan should specify direct notice only as appropriate to respective drought stages.*

**Stage 1 Response -- MILD Water Shortage Conditions**

**Target: Achieve a voluntary \_\_\_ percent reduction in \_\_\_\_\_ (example: total water use, daily water demand, etc.).**

**Best Management Practices for Supply Management:**

*Describe additional measures, if any, to be implemented directly by (name of your water supplier) to manage limited water supplies and/or reduce water demand. Examples include: reduced or discontinued flushing of water mains, activation and use of an alternative supply source(s); use of reclaimed water for non-potable purposes.*

**Voluntary Water Use Restrictions for Reducing Demand :**

- (a) Water customers are requested to voluntarily limit the irrigation of landscaped areas to Sundays and Thursdays for customers with a street address ending in an even number (0, 2, 4, 6 or 8), and Saturdays and Wednesdays for water customers with a street address ending in an odd number (1, 3, 5, 7 or 9), and to irrigate landscapes only between the hours of midnight and 10:00 a.m. and 8:00 p.m. to midnight on designated watering days.
- (b) All operations of the \_\_\_\_\_ (name of your water supplier) shall adhere to water use restrictions prescribed for Stage 2 of the Plan.
- (c) Water customers are requested to practice water conservation and to minimize or discontinue water use for non-essential purposes.

**Stage 2 Response -- MODERATE Water Shortage Conditions**

**Target: Achieve a \_\_\_ percent reduction in \_\_\_\_\_ (example: total water use, daily water demand, etc.).**

**Best Management Practices for Supply Management:**

*Describe additional measures, if any, to be implemented directly by \_\_\_\_\_ (name of your water supplier) to manage limited water supplies and/or reduce water demand. Examples include: reduced or discontinued flushing of water mains, reduced or discontinued irrigation of public landscaped areas; use of an alternative supply source(s); use of reclaimed water for non-potable purposes.*

Water Use Restrictions for Demand Reduction:

Under threat of penalty for violation, the following water use restrictions shall apply to all persons:

- (a) Irrigation of landscaped areas with hose-end sprinklers or automatic irrigation systems shall be limited to Sundays and Thursdays for customers with a street address ending in an even number (0, 2, 4, 6 or 8), and Saturdays and Wednesdays for water customers with a street address ending in an odd number (1, 3, 5, 7 or 9), and irrigation of landscaped areas is further limited to the hours of 12:00 midnight until 10:00 a.m. and between 8:00 p.m. and 12:00 midnight on designated watering days. However, irrigation of landscaped areas is permitted at anytime if it is by means of a hand-held hose, a faucet filled bucket or watering can of five (5) gallons or less, or drip irrigation system.
- (b) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle is prohibited except on designated watering days between the hours of 12:00 midnight and 10:00 a.m. and between 8:00 p.m. and 12:00 midnight. Such washing, when allowed, shall be done with a hand-held bucket or a hand-held hose equipped with a positive shutoff nozzle for quick rises. Vehicle washing may be done at any time on the immediate premises of a commercial car wash or commercial service station. Further, such washing may be exempted from these regulations if the health, safety, and welfare of the public is contingent upon frequent vehicle cleansing, such as garbage trucks and vehicles used to transport food and perishables.
- (c) Use of water to fill, refill, or add to any indoor or outdoor swimming pools, wading pools, or Jacuzzi-type pools is prohibited except on designated watering days between the hours of 12:00 midnight and 10:00 a.m. and between 8 p.m. and 12:00 midnight.
- (d) Operation of any ornamental fountain or pond for aesthetic or scenic purposes is prohibited except where necessary to support aquatic life or where such fountains or ponds are equipped with a recirculation system.
- (e) Use of water from hydrants shall be limited to fire fighting, related activities, or other activities necessary to maintain public health, safety, and welfare, except that use of water from designated fire hydrants for construction purposes may be allowed under special permit from the \_\_\_\_\_ (name of your water supplier).
- (f) Use of water for the irrigation of golf course greens, tees, and fairways is prohibited except on designated watering days between the hours 12:00 midnight

and 10:00 a.m. and between 8 p.m. and 12:00 midnight. However, if the golf course utilizes a water source other than that provided by the \_\_\_\_\_ (name of your water supplier), the facility shall not be subject to these regulations.

- (g) All restaurants are prohibited from serving water to patrons except upon request of the patron.
- (h) The following uses of water are defined as non-essential and are prohibited:
1. wash down of any sidewalks, walkways, driveways, parking lots, tennis courts, or other hard-surfaced areas;
  2. use of water to wash down buildings or structures for purposes other than immediate fire protection;
  3. use of water for dust control;
  4. flushing gutters or permitting water to run or accumulate in any gutter or street; and
  5. failure to repair a controllable leak(s) within a reasonable period after having been given notice directing the repair of such leak(s).

### Stage 3 Response -- SEVERE Water Shortage Conditions

**Target: Achieve a \_\_\_ percent reduction in \_\_\_\_\_ (example: total water use, daily water demand, etc.).**

#### Best Management Practices for Supply Management:

*Describe additional measures, if any, to be implemented directly by \_\_\_\_\_ (name of your water supplier) to manage limited water supplies and/or reduce water demand. Examples include: reduced or discontinued flushing of water mains, reduced or discontinued irrigation of public landscaped areas; use of an alternative supply source(s); use of reclaimed water for non-potable purposes.*

#### Water Use Restrictions for Demand Reduction:

All requirements of Stage 2 shall remain in effect during Stage 3 except:

- (a) Irrigation of landscaped areas shall be limited to designated watering days between the hours of 12:00 midnight and 10:00 a.m. and between 8 p.m. and 12:00 midnight and shall be by means of hand-held hoses, hand-held buckets, drip irrigation, or permanently installed automatic sprinkler system only. The use of hose-end sprinklers is prohibited at all times.
- (b) The watering of golf course tees is prohibited unless the golf course utilizes a water source other than that provided by the \_\_\_\_\_ (name of your water supplier).
- (c) The use of water for construction purposes from designated fire hydrants under special permit is to be discontinued.

### Stage 4 Response -- CRITICAL Water Shortage Conditions

**Target:** Achieve a \_\_\_ percent reduction in \_\_\_\_\_ (example: total water use, daily water demand, etc.).

Best Management Practices for Supply Management:

*Describe additional measures, if any, to be implemented directly by \_\_\_\_\_ (name of your water supplier) to manage limited water supplies and/or reduce water demand. Examples include: reduced or discontinued flushing of water mains, reduced or discontinued irrigation of public landscaped areas; use of an alternative supply source(s); use of reclaimed water for non-potable purposes.*

Water Use Restrictions for Reducing Demand: All requirements of Stage 2 and 3 shall remain in effect during Stage 4 except:

- (a) Irrigation of landscaped areas shall be limited to designated watering days between the hours of 6:00 a.m. and 10:00 a.m. and between 8:00 p.m. and 12:00 midnight and shall be by means of hand-held hoses, hand-held buckets, or drip irrigation only. The use of hose-end sprinklers or permanently installed automatic sprinkler systems are prohibited at all times.
- (b) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle not occurring on the premises of a commercial car wash and commercial service stations and not in the immediate interest of public health, safety, and welfare is prohibited. Further, such vehicle washing at commercial car washes and commercial service stations shall occur only between the hours of 6:00 a.m. and 10:00 a.m. and between 6:00 p.m. and 10 p.m.
- (c) The filling, refilling, or adding of water to swimming pools, wading pools, and Jacuzzi-type pools is prohibited.
- (d) Operation of any ornamental fountain or pond for aesthetic or scenic purposes is prohibited except where necessary to support aquatic life or where such fountains or ponds are equipped with a recirculation system.
- (e) No application for new, additional, expanded, or increased-in-size water service connections, meters, service lines, pipeline extensions, mains, or water service facilities of any kind shall be approved, and time limits for approval of such applications are hereby suspended for such time as this drought response stage or a higher-numbered stage shall be in effect.

**Stage 5 Response -- EMERGENCY Water Shortage Conditions**

**Target:** Achieve a \_\_\_ percent reduction in \_\_\_\_\_ (example: total water use, daily water demand, etc.).

Best Management Practices for Supply Management:

*Describe additional measures, if any, to be implemented directly by \_\_\_\_\_ (name of your water supplier) to manage limited water supplies and/or reduce water demand. Examples include: reduced or discontinued flushing of water mains, reduced or discontinued irrigation of public landscaped areas; use of an alternative supply source(s); use of reclaimed water for non-potable purposes.*

Water Use Restrictions for Reducing Demand. All requirements of Stage 2, 3, and 4 shall remain in effect during Stage 5 except:

- (a) Irrigation of landscaped areas is absolutely prohibited.
- (b) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle is absolutely prohibited.

**Section X: Enforcement**

(a) No person shall knowingly or intentionally allow the use of water from the \_\_\_\_\_ (name of your water supplier) for residential, commercial, industrial, agricultural, governmental, or any other purpose in a manner contrary to any provision of this Plan, or in an amount in excess of that permitted by the drought response stage in effect at the time pursuant to action taken by \_\_\_\_\_ (designated official), or his/her designee, in accordance with provisions of this Plan.

(b) Any person who violates this Plan is guilty of a misdemeanor and, upon conviction shall be punished by a fine of not less than \_\_\_\_\_ dollars (\$\_\_\_) and not more than \_\_\_\_\_ dollars (\$\_\_\_). Each day that one or more of the provisions in this Plan is violated shall constitute a separate offense. If a person is convicted of three or more distinct violations of this Plan, the \_\_\_\_\_ (designated official) shall, upon due notice to the customer, be authorized to discontinue water service to the premises where such violations occur. Services discontinued under such circumstances shall be restored only upon payment of a re-connection charge, hereby established at \$\_\_\_\_\_, and any other costs incurred by the \_\_\_\_\_ (name of your water supplier) in discontinuing service. In addition, suitable assurance must be given to the \_\_\_\_\_ (designated official) that the same action shall not be repeated while the Plan is in effect. Compliance with this plan may also be sought through injunctive relief in the district court.

(c) Any person, including a person classified as a water customer of the \_\_\_\_\_ (name of your water supplier), in apparent control of the property where a violation occurs or originates shall be presumed to be the violator, and proof that the violation occurred on the person's property shall constitute a rebuttable presumption that the person in apparent control of the property committed the violation, but any such person shall have the right to show that he/she

did not commit the violation. Parents shall be presumed to be responsible for violations of their minor children and proof that a violation, committed by a child, occurred on property within the parents' control shall constitute a rebuttable presumption that the parent committed the violation, but any such parent may be excused if he/she proves that he/she had previously directed the child not to use the water as it was used in violation of this Plan and that the parent could not have reasonably known of the violation.

(d) Any employee of the \_\_\_\_\_ (name of your water supplier), police officer, or other \_\_\_\_\_ employee designated by the \_\_\_\_\_ (designated official), may issue a citation to a person he/she reasonably believes to be in violation of this Ordinance. The citation shall be prepared in duplicate and shall contain the name and address of the alleged violator, if known, the offense charged, and shall direct him/her to appear in the \_\_\_\_\_ (example: municipal court) on the date shown on the citation for which the date shall not be less than 3 days nor more than 5 days from the date the citation was issued. The alleged violator shall be served a copy of the citation. Service of the citation shall be complete upon delivery of the citation to the alleged violator, to an agent or employee of a violator, or to a person over 14 years of age who is a member of the violator's immediate family or is a resident of the violator's residence. The alleged violator shall appear in \_\_\_\_\_ (example: municipal court) to enter a plea of guilty or not guilty for the violation of this Plan. If the alleged violator fails to appear in \_\_\_\_\_ (example: municipal court), a warrant for his/her arrest may be issued. A summons to appear may be issued in lieu of an arrest warrant. These cases shall be expedited and given preferential setting in \_\_\_\_\_ (example: municipal court) before all other cases.

#### **Section XI: Variances**

The \_\_\_\_\_ (designated official), or his/her designee, may, in writing, grant temporary variance for existing water uses otherwise prohibited under this Plan if it is determined that failure to grant such variance would cause an emergency condition adversely affecting the health, sanitation, or fire protection for the public or the person requesting such variance and if one or more of the following conditions are met:

- (a) Compliance with this Plan cannot be technically accomplished during the duration of the water supply shortage or other condition for which the Plan is in effect.
- (b) Alternative methods can be implemented which will achieve the same level of reduction in water use.

Persons requesting an exemption from the provisions of this Ordinance shall file a petition for variance with the \_\_\_\_\_ (name of your water supplier) within 5 days after the Plan or a particular drought response stage has been invoked. All petitions for variances shall be reviewed by the \_\_\_\_\_ (designated official), or his/her designee, and shall include the following:

- (a) Name and address of the petitioner(s).
- (b) Purpose of water use.
- (c) Specific provision(s) of the Plan from which the petitioner is requesting relief.
- (d) Detailed statement as to how the specific provision of the Plan adversely affects the petitioner or what damage or harm will occur to the petitioner or others if petitioner complies with this Ordinance.
- (e) Description of the relief requested.

- (f) Period of time for which the variance is sought.
- (g) Alternative water use restrictions or other measures the petitioner is taking or proposes to take to meet the intent of this Plan and the compliance date.
- (h) Other pertinent information.

EXAMPLE RESOLUTION FOR ADOPTION OF A  
DROUGHT CONTINGENCY PLAN

RESOLUTION NO. \_\_\_\_\_

A RESOLUTION OF THE BOARD OF DIRECTORS OF THE  
\_\_\_\_\_ (name of water supplier) ADOPTING A  
DROUGHT CONTINGENCY PLAN.

WHEREAS, the Board recognizes that the amount of water available to the \_\_\_\_\_  
(name of water supplier) and its water utility customers are limited and subject to depletion  
during periods of extended drought;

WHEREAS, the Board recognizes that natural limitations due to drought conditions and other  
acts of God cannot guarantee an uninterrupted water supply for all purposes;

WHEREAS, Section 11.1272 of the *Texas Water Code* and applicable rules of the Texas  
Commission on Environmental Quality require all public water supply systems in Texas to  
prepare a drought contingency plan; and

WHEREAS, as authorized under law, and in the best interests of the customers of the  
\_\_\_\_\_ (name of water supply system), the Board deems it expedient and necessary  
to establish certain rules and policies for the orderly and efficient management of limited water  
supplies during drought and other water supply emergencies;

NOW THEREFORE, BE IT RESOLVED BY THE BOARD OF DIRECTORS OF THE  
\_\_\_\_\_ (name of water supplier):

SECTION 1. That the Drought Contingency Plan attached hereto as Exhibit "A" and  
made part hereof for all purposes be, and the same is hereby, adopted as the official policy of the  
\_\_\_\_\_ (name of water supplier).

SECTION 2. That the \_\_\_\_\_ (e.g., general manager) is hereby directed to  
implement, administer, and enforce the Drought Contingency Plan.

SECTION 3. That this resolution shall take effect immediately upon its passage.

DULY PASSED BY THE BOARD OF DIRECTORS OF THE \_\_\_\_\_, ON THIS \_\_\_  
day of \_\_\_\_\_, 20\_\_.

**President, Board of Directors**

ATTESTED TO:

Secretary, Board of Directors

Model Region K Drought Contingency Plan Template  
Irrigation Uses

**THIS PAGE LEFT INTENTIONALLY BLANK**

**Model Drought Contingency Plan Template (Irrigation Uses)****DROUGHT CONTINGENCY PLAN****FOR****(Name of irrigation district)****(Address)****(Date)****Section I: Declaration of Policy, Purpose, and Intent**

The Board of Directors of the \_\_\_\_\_ (name of irrigation district) deems it to be in the interest of the District to adopt Rules and Regulations governing the equitable and efficient allocation of limited water supplies during times of shortage. These Rules and Regulations constitute the District's drought contingency plan required under Section 11.1272, Texas Water Code, *Vernon's Texas Codes Annotated*, and associated administrative rules of the Texas Commission on Environmental Quality (Title 30, Texas Administrative Code, Chapter 288).

**Section II: User Involvement**

Opportunity for users of water from the \_\_\_\_\_ (name of irrigation district) was provided by means of \_\_\_\_\_ (describe methods used to inform water users about the preparation of the plan and opportunities for input; for example, scheduling and providing notice of a public meeting to accept user input on the plan).

**Section III: User Education**

The \_\_\_\_\_ (name of irrigation district) will periodically provide water users with information about the Plan, including information about the conditions under which water allocation is to be initiated or terminated and the district's policies and procedures for water allocation. This information will be provided by means of \_\_\_\_\_ (e.g. describe methods to be used to provide water users with information about the Plan; for example, by providing copies of the Plan and by posting water allocation rules and regulations on the district's public bulletin board).

**Section IV: Authorization**

The \_\_\_\_\_ (e.g., general manager) is hereby authorized and directed to implement the applicable provision of the Plan upon determination by the Board that such implementation is necessary to ensure the equitable and efficient allocation of limited water supplies during times of shortage.

**Section V: Application**

The provisions of the Plan shall apply to all persons utilizing water provided by the \_\_\_\_\_ (name of irrigation district). The term "person" as used in the Plan includes individuals, corporations, partnerships, associations, and all other legal entities.

**Section VI: Initiation of Water Allocation**

The \_\_\_\_\_ (designated official) shall monitor water supply conditions on a \_\_\_\_\_ (e.g. weekly, monthly) basis and shall make recommendations to the Board regarding irrigation of water allocation. Upon approval of the Board, water allocation will become effective when \_\_\_\_\_ (describe the criteria and the basis for the criteria):

**Below are examples of the types of triggering criteria that might be used; singly or in combination, in an irrigation district's drought contingency plan:**

**Example 1:** Water in storage in the \_\_\_\_\_ (name of reservoir) is equal to or less than \_\_\_\_\_ (acre-feet and/or percentage of storage capacity).

**Example 2:** Combined storage in the \_\_\_\_\_ (name or reservoirs) reservoir system is equal to or less than \_\_\_\_\_ (acre-feet and/or percentage of storage capacity).

**Example 3:** Flows as measured by the U.S. Geological Survey gage on the \_\_\_\_\_ (name of reservoir) near \_\_\_\_\_, Texas reaches \_\_\_\_\_ cubic feet per second (cfs).

**Example 4:** The storage balance in the district's irrigation water rights account reaches \_\_\_\_\_ acre-feet.

**Example 5:** The storage balance in the district's irrigation water rights account reaches an amount equivalent to \_\_\_\_\_ (number) irrigations for each flat rate acre in which all flat rate assessments are paid and current.

**Example 6:** The \_\_\_\_\_ (name of entity supplying water to the irrigation district) notifies the district that water deliveries will be limited to \_\_\_\_\_ acre-feet per year (i.e. a level below that required for unrestricted irrigation).

**Section VII: Termination of Water Allocation**

The district's water allocation policies will remain in effect until the conditions defined in Section IV of the Plan no longer exist and the Board deems that the need to allocate water no longer exists.

**Section VIII: Notice**

Notice of the initiation of water allocation will be given by notice posted on the District's public bulletin board and by mail to each \_\_\_\_\_ (e.g. landowner, holders of active irrigation accounts, etc.).

**Section IX: Water Allocation**

- (a) In identifying **specific, quantified targets** for water allocation to be achieved during periods of water shortages and drought, each irrigation user shall be allocated \_\_\_\_\_ irrigations or \_\_\_\_\_ acre-feet of water each flat rate acre on

which all taxes, fees, and charges have been paid. The water allotment in each irrigation account will be expressed in acre-feet of water.

**Include explanation of water allocation procedure. For example, in the Lower Rio Grande Valley, an “irrigation” is typically considered to be equivalent to eight (8) inches of water per irrigation acre; consisting of six (6) inches of water per acre applied plus two (2) inches of water lost in transporting the water from the river to the land. Thus, three irrigations would be equal to 24 inches of water per acre or an allocation of 2.0 acre-feet of water measured at the diversion from the river.**

- (b) As additional water supplies become available to the District in an amount reasonably sufficient for allocation to the District’s irrigation users, the additional water made available to the District will be equally distributed, on a pro rata basis, to those irrigation users having \_\_\_\_\_.

**Example 1: An account balance of less than \_\_\_\_\_ irrigations for each flat rate acre (i.e. \_\_\_\_\_ acre-feet).**

**Example 2: An account balance of less than \_\_\_\_\_ acre-feet of water for each flat rate acre.**

**Example 3: An account balance of less than \_\_\_\_\_ acre-feet of water. (c)**

The amount of water charged against a user’s water allocation will be \_\_\_\_\_ (e.g. eight inches) per irrigation, or one allocation unit, unless water deliveries to the land are metered. Metered water deliveries will be charges based on actual measured use. In order to maintain parity in charging use against a water allocation between non-metered and metered deliveries, a loss factor of \_\_\_\_\_ percent of the water delivered in a metered situation will be added to the measured use and will be charged against the user’s water allocation. Any metered use, with the loss factor applied, that is less than eight (8) inches per acre shall be credited back to the allocation unit and will be available to the user. It shall be a violation of the Rules and Regulations for a water user to use water in excess of the amount of water contained in the users irrigation account.

- (d) Acreage in an irrigation account that has not been irrigated for any reason within the last two (2) consecutive years will be considered inactive and will not be allocated water. Any landowner whose land has not been irrigated within the last two (2) consecutive years, may, upon application to the District expressing intent to irrigate the land, receive future allocations. However, irrigation water allocated shall be applied only upon the acreage to which it was allocated and such water allotment cannot be transferred until there have been two consecutive years of use.

**Section X: Transfers of Allotments**

- (a) A water allocation in an active irrigation account may be transferred within the boundaries of the District from one irrigation account to another. The transfer of water can only be made by the landowner's agent who is authorized in writing to act on behalf of the landowner in the transfer of all or part of the water allocation from the described land of the landowner covered by the irrigation account.
- (b) A water allocation may not be transferred to land owned by a landowner outside the District boundaries.

**or**

A water allocation may be transferred to land outside the District's boundaries by paying the current water charge as if the water was actually delivered by the District to the land covered by an irrigation account. The amount of water allowed to be transferred shall be stated in terms of acre-feet and deducted from the landowner's current allocation balance in the irrigation account. Transfers of water outside the District shall not affect the allocation of water under Section VII of these Rules and Regulations.

- (c) Water from outside the District may not be transferred by a landowner for use within the District.

**or**

Water from outside the District may be transferred by a landowner for use within the District. The District will divert and deliver the water on the same basis as District water is delivered, except that a \_\_\_ percent conveyance loss will be charged against the amount of water transferred for use in the District as the water is delivered.

**Section XI: Penalties**

Any person who willfully opens, closes, changes or interferes with any headgate or uses water in violation of these Rules and Regulations, shall be considered in violation of Section 11.0083, Texas Water Code, *Vernon's Texas Codes Annotated*, which provides for punishment by fine of not less than \$10.00 nor more than \$200.00 or by confinement in the county jail for not more than thirty (30) days, or both, for each violation, and these penalties provided by the laws of the State and may be enforced by complaints filed in the appropriate court jurisdiction in \_\_\_\_\_ County, all in accordance with Section 11.083; and in addition, the District may pursue a civil remedy in the way of damages and/or injunction against the violation of any of the foregoing Rules and Regulations.

**Section XII: Severability**

It is hereby declared to be the intention of the Board of Directors of the \_\_\_\_\_ (name of irrigation district) that the sections, paragraphs, sentences, clauses, and phrases of this Plan shall be declared unconstitutional by the valid judgment or decree of any court of competent

jurisdiction, such unconstitutionality shall not affect any of the remaining phrases, clauses, sentences, paragraphs, and sections of this Plan, since the same would not have been enacted by the Board without the incorporation into this Plan of any such unconstitutional phrase, clause, sentence, paragraph, or section.

**Section XIII: Authority**

The foregoing rules and regulations are adopted pursuant to and in accordance with Sections 11.039, 11.083, 11.1272; Section 49.004; and Section 58.127-130 of the Texas Water Code, *Vernon's Texas Codes Annotated*.

**Section XIV: Effective Date of Plan**

The effective date of this Rule shall be five (5) days following the date of Publication hereof and ignorance of the Rules and Regulations is not a defense for a prosecution for enforcement of the violation of the Rules and Regulations.

EXAMPLE RESOLUTION FOR ADOPTION OF A DROUGHT CONTINGENCY PLAN

RESOLUTION NO. \_\_\_\_\_

A RESOLUTION OF THE BOARD OF DIRECTORS OF THE \_\_\_\_\_ (name of water supplier) ADOPTING A DROUGHT CONTINGENCY PLAN.

WHEREAS, the Board recognizes that the amount of water available to the \_\_\_\_\_ (name of water supplier) and its water utility customers is limited and subject to depletion during periods of extended drought;

WHEREAS, the Board recognizes that natural limitations due to drought conditions and other acts of God cannot guarantee an uninterrupted water supply for all purposes;

WHEREAS, Section 11.1272 of the Texas Water Code and applicable rules of the Texas Commission on Environmental Quality require all public water supply systems in Texas to prepare a drought contingency plan; and

WHEREAS, as authorized under law, and in the best interests of the customers of the \_\_\_\_\_ (name of water supply system), the Board deems it expedient and necessary to establish certain rules and policies for the orderly and efficient management of limited water supplies during drought and other water supply emergencies;

NOW THEREFORE, BE IT RESOLVED BY THE BOARD OF DIRECTORS OF THE \_\_\_\_\_ (name of water supplier):

SECTION 1. That the Drought Contingency Plan attached hereto as Exhibit A and made part hereof for all purposes be, and the same is hereby, adopted as the official policy of the \_\_\_\_\_ (name of water supplier).

SECTION 2. That the \_\_\_\_\_ (e.g., general manager) is hereby directed to implement, administer, and enforce the Drought Contingency Plan.

SECTION 3. That this resolution shall take effect immediately upon its passage.

DULY PASSED BY THE BOARD OF DIRECTORS OF THE \_\_\_\_\_, ON THIS \_\_ day of \_\_\_\_\_, 20\_\_.

\_\_\_\_\_  
President, Board of Directors

ATTESTED TO:

Secretary, Board of Director

Model Region K Drought Contingency Plan Template  
Wholesale Water Providers

**THIS PAGE LEFT INTENTIONALLY BLANK**

Model Drought Contingency Plan Template (Wholesale Public Water Suppliers)

**DROUGHT CONTINGENCY PLAN  
FOR THE  
(Name of wholesale water supplier)  
(address)  
(CCN)  
(PWS)  
(Date)**

**Section I: Declaration of Policy, Purpose, and Intent**

In order to conserve the available water supply and/or to protect the integrity of water supply facilities, with particular regard for domestic water use, sanitation, and fire protection, and to protect and preserve public health, welfare, and safety and minimize the adverse impacts of water supply shortage or other water supply emergency conditions, the \_\_\_\_\_ (name of your water supplier) adopts the following Drought Contingency Plan (the Plan).

**Section II: Public Involvement**

Opportunity for the public and wholesale water customers to provide input into the preparation of the Plan was provided by \_\_\_\_\_ (name of your water supplier) by means of \_\_\_\_\_ (describe methods used to inform the public and wholesale customers about the preparation of the plan and opportunities for input; for example, scheduling and proving public notice of a public meeting to accept input on the Plan).

**Section III: Wholesale Water Customer Education**

The \_\_\_\_\_ (name of your water supplier) will periodically provide wholesale water customers with information about the Plan, including information about the conditions under which each stage of the Plan is to be initiated or terminated and the drought response measures to be implemented in each stage. This information will be provided by means of \_\_\_\_\_ (e.g., describe methods to be used to provide customers with information about the Plan; for example, providing a copy of the Plan or periodically including information about the Plan with invoices for water sales).

**Section IV: Coordination with the Lower Colorado Regional Water Planning Group**

The service area of the \_\_\_\_\_ (name of your water supplier) is located within the Lower Colorado Regional Water Planning Area and \_\_\_\_\_ (name of your water supplier) has provided a copy of this Plan to the Lower Colorado Regional Water Planning Group.

**Section V: Authorization**

The \_\_\_\_\_ (designated official; for example, the general manager or executive director), or his/her designee, is hereby authorized and directed to implement the applicable provisions of this Plan upon determination that such implementation is necessary to protect public health, safety, and welfare. The \_\_\_\_\_, or his/her designee, shall have the authority to initiate or terminate drought or other water supply emergency response measures as described in this Plan.

**Section VI: Application**

The provisions of this Plan shall apply to all customers utilizing water provided by the \_\_\_\_\_ (name of your water supplier). The terms person and customer as used in the Plan include individuals, corporations, partnerships, associations, and all other legal entities.

**Section VII: Criteria for Initiation and Termination of Drought Response Stages**

The \_\_\_\_\_ (designated official), or his/her designee, shall monitor water supply and/or demand conditions on a (e.g., weekly, monthly) basis and shall determine when conditions warrant initiation or termination of each stage of the Plan. Customer notification of the initiation or termination of drought response stages will be made by mail or telephone. The news media will also be informed.

The triggering criteria described below are based on:

\_\_\_\_\_ (provide a brief description of the rationale for the triggering criteria; for example, triggering criteria are based on a statistical analysis of the vulnerability of the water source under drought of record conditions).

**Stage 1 Triggers -- MILD Water Shortage Conditions**

Requirements for initiation: The \_\_\_\_\_ (name of your water supplier) will recognize that a mild water shortage condition exists when \_\_\_\_\_ (describe triggering criteria, see examples below).

***Below are examples of the types of triggering criteria that might be used in a wholesale water supplier's drought contingency plan. One or a combination of such criteria may be defined for each drought response stage:***

***Example 1: Water in storage in the \_\_\_\_\_ (name of reservoir) is equal to or less than \_\_\_\_\_ (acre-feet and/or percentage of storage capacity).***

**Example 2:** *When the combined storage in the \_\_\_\_\_ (name of reservoirs) is equal to or less than \_\_\_\_\_ (acre-feet and/or percentage of storage capacity).*

**Example 3:** *Flows as measured by the U.S. Geological Survey gage on the \_\_\_\_\_ (name of river) near \_\_\_\_\_, Texas reaches \_\_\_\_\_ cubic feet per second (cfs).*

**Example 4:** *When total daily water demand equals or exceeds \_\_\_\_\_ million gallons for \_\_\_\_\_ consecutive days or \_\_\_\_\_ million gallons on a single day.*

**Example 5:** *When total daily water demand equals or exceeds \_\_\_\_\_ percent of the safe operating capacity of \_\_\_\_\_ million gallons per day for \_\_\_\_\_ consecutive days or \_\_\_\_\_ percent on a single day.*

Requirements for termination: Stage 1 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of \_\_\_\_\_ (e.g., 30) consecutive days. The \_\_\_\_\_ (name of water supplier) will notify its wholesale customers and the media of the termination of Stage 1 in the same manner as the notification of initiation of Stage 1 of the Plan.

### **Stage 2 Triggers -- MODERATE Water Shortage Conditions**

Requirements for initiation: The \_\_\_\_\_ (name of your water supplier) will recognize that a moderate water shortage condition exists when \_\_\_\_\_ (describe triggering criteria).

Requirements for termination: Stage 2 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of \_\_\_\_\_ (e.g., 30) consecutive days. Upon termination of Stage 2, Stage 1 becomes operative. The \_\_\_\_\_ (name of your water supplier) will notify its wholesale customers and the media of the termination of Stage 2 in the same manner as the notification of initiation of Stage 1 of the Plan.

### **Stage 3 Triggers -- SEVERE Water Shortage Conditions**

Requirements for initiation: The \_\_\_\_\_ (name of your water supplier) will recognize that a severe water shortage condition exists when \_\_\_\_\_ (describe triggering criteria; see examples in Stage 1).

Requirements for termination: Stage 3 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of \_\_\_\_\_ (e.g., 30) consecutive days. Upon termination of Stage 3, Stage 2 becomes operative. The \_\_\_\_\_ (name of your water supplier)

will notify its wholesale customers and the media of the termination of Stage 2 in the same manner as the notification of initiation of Stage 3 of the Plan.

#### **Stage 4 Triggers -- CRITICAL Water Shortage Conditions**

Requirements for initiation - The \_\_\_\_\_ (name of your water supplier) will recognize that an emergency water shortage condition exists when \_\_\_\_\_ (*describe triggering criteria; see examples below*).

*Example 1. Major water line breaks, or pump or system failures occur, which cause unprecedented loss of capability to provide water service; or*

*Example 2. Natural or man-made contamination of the water supply source(s).*

Requirements for termination: Stage 4 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of \_\_\_\_ (e.g., 30) consecutive days. The \_\_\_\_\_ (name of your water supplier) will notify its wholesale customers and the media of the termination of Stage 4.

#### **Section VIII: Drought Response Stages**

The \_\_\_\_\_ (designated official), or his/her designee, shall monitor water supply and/or demand conditions and, in accordance with the triggering criteria set forth in Section VI, shall determine that mild, moderate, or severe water shortage conditions exist or that an emergency condition exists and shall implement the following actions:

#### **Stage 1 Response -- MILD Water Shortage Conditions**

Target: Achieve a voluntary \_\_ percent reduction in \_\_\_\_\_ (e.g., total water use, daily water demand, etc.).

#### Best Management Practices for Supply Management:

Describe additional measures, if any, to be implemented directly by \_\_\_\_\_ (designated official), or his/her designee(s), to manage limited water supplies and/or reduce water demand. Examples include modifying reservoir operations procedures, interconnection with another water system, and use of reclaimed water for non-potable purposes.

#### Water Use Restrictions for Reducing Demand:

(a) The \_\_\_\_\_ (designated official), or his/her designee(s), will contact wholesale water customers to discuss water supply and/or demand conditions and will

request that wholesale water customers initiate voluntary measures to reduce water use (e.g., implement Stage 1 of the customer's drought contingency plan).

(b) The \_\_\_\_\_ (designated official), or his/her designee(s), will provide a weekly report to news media with information regarding current water supply and/or demand conditions, projected water supply and demand conditions if drought conditions persist, and consumer information on water conservation measures and practices.

## Stage 2 Response -- MODERATE Water Shortage Conditions

**Target:** Achieve a \_\_\_ percent reduction in \_\_\_\_\_ (e.g., total water use, daily water demand, etc.).

### Best Management Practices for Supply Management:

*Describe additional measures, if any, to be implemented directly by \_\_\_\_\_ (designated official), or his/her designee(s), to manage limited water supplies and/or reduce water demand. Examples include modifying reservoir operations procedures, interconnection with another water system, and use of reclaimed water for non-potable purposes.*

### Water Use Restrictions for Reducing Demand:

(a) The \_\_\_\_\_ (designated official), or his/her designee(s), will initiate weekly contact with wholesale water customers to discuss water supply and/or demand conditions and the possibility of pro rata curtailment of water diversions and/or deliveries.

(b) The \_\_\_\_\_ (designated official), or his/her designee(s), will request wholesale water customers to initiate mandatory measures to reduce non-essential water use (e.g., implement Stage 2 of the customer's drought contingency plan).

(c) The \_\_\_\_\_ (designated official), or his/her designee(s), will initiate preparations for the implementation of pro rata curtailment of water diversions and/or deliveries by preparing a monthly water usage allocation baseline for each wholesale customer according to the procedures specified in Section VI of the Plan.

(d) The \_\_\_\_\_ (designated official), or his/her designee(s), will provide a weekly report to news media with information regarding current water supply and/or demand conditions, projected water supply and demand conditions if drought conditions persist, and consumer information on water conservation measures and practices.

## Stage 3 Response -- SEVERE Water Shortage Conditions

**Target:** Achieve a \_\_\_ percent reduction in \_\_\_\_\_ (e.g., total water use, daily water demand, etc.).

**Best Management Practices for Supply Management:**

*Describe additional measures, if any, to be implemented directly by \_\_\_\_\_ (designated official), or his/her designee(s), to manage limited water supplies and/or reduce water demand. Examples include modifying reservoir operations procedures, interconnection with another water system, and use of reclaimed water for non-potable purposes.*

**Water Use Restrictions for Reducing Demand:**

- (a) The \_\_\_\_\_ (designated official), or his/her designee(s), will contact wholesale water customers to discuss water supply and/or demand conditions and will request that wholesale water customers initiate additional mandatory measures to reduce non-essential water use (e.g., implement Stage 2 of the customer's drought contingency plan).
- (b) The \_\_\_\_\_ (designated official), or his/her designee(s), will initiate pro rata curtailment of water diversions and/or deliveries for each wholesale customer according to the procedures specified in Section VI of the Plan.
- (c) The \_\_\_\_\_ (designated official), or his/her designee(s), will provide a weekly report to news media with information regarding current water supply and/or demand conditions, projected water supply and demand conditions if drought conditions persist, and consumer information on water conservation measures and practices.

**Stage 4 Response -- EMERGENCY Water Shortage Conditions**

Whenever emergency water shortage conditions exist as defined in Section VII of the Plan, the \_\_\_\_\_ (designated official) shall:

1. Assess the severity of the problem and identify the actions needed and time required to solve the problem.
2. Inform the utility director or other responsible official of each wholesale water customer by telephone or in person and suggest actions, as appropriate, to alleviate problems (e.g., notification of the public to reduce water use until service is restored).
3. If appropriate, notify city, county, and/or state emergency response officials for assistance.

- 4. Undertake necessary actions, including repairs and/or clean-up as needed.
- 5. Prepare a post-event assessment report on the incident and critique of emergency response procedures and actions.

**Section IX: Pro Rata Water Allocation**

In the event that the triggering criteria specified in Section VII of the Plan for Stage 3 Severe Water Shortage Conditions have been met, the \_\_\_\_\_ (designated official) is hereby authorized initiate allocation of water supplies on a pro rata basis in accordance with Texas Water Code Section 11.039.

**Section X: Enforcement**

During any period when pro rata allocation of available water supplies is in effect, wholesale customers shall pay the following surcharges on excess water diversions and/or deliveries:

- \_\_\_\_\_ times the normal water charge per acre-foot for water diversions and/or deliveries in excess of the monthly allocation up through 5 percent above the monthly allocation.
- \_\_\_\_\_ times the normal water charge per acre-foot for water diversions and/or deliveries in excess of the monthly allocation from 5 percent through 10 percent above the monthly allocation.
- \_\_\_\_\_ times the normal water charge per acre-foot for water diversions and/or deliveries in excess of the monthly allocation from 10 percent through 15 percent above the monthly allocation.
- \_\_\_\_\_ times the normal water charge per acre-foot for water diversions and/or deliveries more than 15 percent above the monthly allocation.

The above surcharges shall be cumulative.

**Section XI: Variances**

The \_\_\_\_\_ (designated official), or his/her designee, may, in writing, grant a temporary variance to the pro rata water allocation policies provided by this Plan if it is determined that failure to grant such variance would cause an emergency condition adversely affecting the public health, welfare, or safety and if one or more of the following conditions are met:

- (a) Compliance with this Plan cannot be technically accomplished during the duration of the water supply shortage or other condition for which the Plan is in effect.
- (b) Alternative methods can be implemented which will achieve the same level of reduction in water use.

Persons requesting an exemption from the provisions of this Plan shall file a petition for variance with the \_\_\_\_\_ (designated official) within 5 days after pro rata allocation has been invoked. All petitions for variances shall be reviewed by the \_\_\_\_\_ (governing body), and shall include the following:

- (a) Name and address of the petitioner(s).
- (b) Detailed statement with supporting data and information as to how the pro rata allocation of water under the policies and procedures established in the Plan adversely affects the petitioner or what damage or harm will occur to the petitioner or others if petitioner complies with this Ordinance.
- (c) Description of the relief requested.
- (d) Period of time for which the variance is sought.
- (e) Alternative measures the petitioner is taking or proposes to take to meet the intent of this Plan and the compliance date.
- (f) Other pertinent information.

Variances granted by the \_\_\_\_\_ (governing body) shall be subject to the following conditions, unless waived or modified by the \_\_\_\_\_ (governing body) or its designee:

- (a) Variances granted shall include a timetable for compliance.
- (b) Variances granted shall expire when the Plan is no longer in effect, unless the petitioner has failed to meet specified requirements.

No variance shall be retroactive or otherwise justify any violation of this Plan occurring prior to the issuance of the variance.

**Section XII: Severability**

It is hereby declared to be the intention of the \_\_\_\_\_ (governing body of your water supplier) that the sections, paragraphs, sentences, clauses, and phrases of this Plan are severable and, if any phrase, clause, sentence, paragraph, or section of this Plan shall be declared unconstitutional by the valid judgment or decree of any court of competent jurisdiction, such unconstitutionality shall not affect any of the remaining phrases, clauses, sentences, paragraphs, and sections of this Plan, since the same would not have been enacted by the \_\_\_\_\_ (governing body of your water supplier) without the incorporation into this Plan of any such unconstitutional phrase, clause, sentence, paragraph, or section.

**EXAMPLE RESOLUTION FOR ADOPTION OF A  
DROUGHT CONTINGENCY PLAN**

**RESOLUTION NO. \_\_\_\_\_**

A RESOLUTION OF THE BOARD OF DIRECTORS OF THE \_\_\_\_\_ (name of water supplier) ADOPTING A DROUGHT CONTINGENCY PLAN.

WHEREAS, the Board recognizes that the amount of water available to the \_\_\_\_\_ (name of water supplier) and its water utility customers is limited and subject to depletion during periods of extended drought;

WHEREAS, the Board recognizes that natural limitations due to drought conditions and other acts of God cannot guarantee an uninterrupted water supply for all purposes;

WHEREAS, Section 11.1272 of the *Texas Water Code* and applicable rules of the Texas Commission on Environmental Quality require all public water supply systems in Texas to prepare a drought contingency plan; and

WHEREAS, as authorized under law, and in the best interests of the customers of the \_\_\_\_\_ (name of water supply system), the Board deems it expedient and necessary to establish certain rules and policies for the orderly and efficient management of limited water supplies during drought and other water supply emergencies;

NOW THEREFORE, BE IT RESOLVED BY THE BOARD OF DIRECTORS OF THE \_\_\_\_\_ (name of water supplier):

SECTION 1. That the Drought Contingency Plan attached hereto as “Exhibit A” and made part hereof for all purposes be, and the same is hereby, adopted as the official policy of the \_\_\_\_\_ (name of water supplier).

SECTION 2. That the \_\_\_\_\_ (e.g., general manager) is hereby directed to implement, administer, and enforce the Drought Contingency Plan.

SECTION 3. That this resolution shall take effect immediately upon its passage.

DULY PASSED BY THE BOARD OF DIRECTORS OF THE \_\_\_\_\_, ON THIS \_\_\_ day of \_\_\_\_\_, 20\_\_.

\_\_\_\_\_  
President, Board of Directors

ATTESTED TO:

\_\_\_\_\_  
Secretary, Board of Directors

**THIS PAGE LEFT INTENTIONALLY BLANK**

Model Region K Drought Contingency Plan Template  
Steam-Electric Water Users

**THIS PAGE LEFT INTENTIONALLY BLANK**

**Model Drought Contingency Plan Template (Steam-Electric Uses)****DROUGHT CONTINGENCY PLAN  
FOR  
(Name of Facility)  
(Address)  
(Date)****Section I: Declaration of Policy, Purpose, and Intent**

In cases of extreme drought, periods of abnormally high usage, system contamination, or extended reduction in ability to supply water due to equipment failure, temporary restrictions may be instituted to limit non-essential water usage. The purpose of this Drought Contingency Plan (the Plan), adopted by \_\_\_\_\_ (*name of your facility*) is to encourage a reduction of water use in order to maintain adequate supply to ensure the safe and reliable operation of \_\_\_\_\_ (*name of your facility*), and to protect the fresh water resources available.

**Section II: Facility Staff Education**

Management at \_\_\_\_\_ (*name of your facility*) will periodically provide the employees of the facility with information about the Plan, including the importance of the Plan, information about the conditions under which each stage of the Plan is to be initiated or terminated and the drought response measures to be implemented in each stage. This information will be provided by means of \_\_\_\_\_ (*example: describe methods to be used to provide employees with information about the Plan; for example, providing a copy of the Plan or holding staff meetings*).

**Section III: Coordination with Regional Water Planning Groups**

The water service area of the \_\_\_\_\_ (name of your facility) is located within the Lower Colorado Regional Water Planning Area (Region K) and the \_\_\_\_\_ (*name of your facility*) has provided a copy of the Plan to the Lower Colorado Regional Water Planning Group.

**Section IV: Authorization**

The \_\_\_\_\_ (*designated representative; for example, the plant manager*), or his/her designee, is hereby authorized and directed to implement the applicable provisions of this Plan upon determination that such implementation is necessary to protect public health, safety, and welfare. The \_\_\_\_\_ or his/her designee, shall have the authority to initiate or terminate drought or other water supply emergency response measures as described in this Plan.

**Section V: Criteria for Initiation and Termination of Drought Response Stages**

The \_\_\_\_\_ (*designated representative*), or his/her designee, shall monitor water supply and/or demand conditions and shall determine when conditions warrant initiation or termination of each stage of the Plan.

### **Stage 1 – Year-Round Water Conservation**

Action: Implement the facility’s Water Conservation Plan (example)

Reduction Target: None (operation under normal conditions); Include definition of year-round conservation in Water Conservation Plan. (examples)

Initiation: Ongoing

Termination: None

Water Use Reduction Response Measures (examples):

1. Irrigation of landscaped areas with hose-end sprinklers or in-ground irrigation systems is limited to no more than twice weekly. Water hours will be limited to between midnight and 10 a.m. and 7 p.m. and midnight.
2. \_\_\_\_\_ (Other measures, as needed.)

### **Stage 2 – MODERATE Water Shortage Conditions**

Action: Curtail outdoor use of water for irrigation of landscape. (example)

Reduction Target: Achieve a \_\_\_\_\_ percent reduction in \_\_\_\_\_ (e.g. percent of non-cooling water use)

Initiation: The \_\_\_\_\_ (*name of your facility*) will recognize that a moderate water shortage condition exists when \_\_\_\_\_ (*describe triggering criteria*).

Termination: Stage 2 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased. Upon termination of Stage 2, Stage 1, becomes operative.

Water Use Reduction Response Measures (examples):

1. Prohibit irrigation of landscape, except by hand-held hose, bucket, or drip irrigation.
2. Discontinue irrigation of lawns.
3. Discontinue washing and rinsing of vehicles and other equipment unless required for operation of the facility or to reduce hazards.
4. \_\_\_\_\_ (Other measures, as needed.)

**Stage 3 -- SEVERE Water Shortage Conditions**

Action: Curtail consumptive water uses. (example)

Reduction Target: Achieve a \_\_\_\_\_ percent reduction in \_\_\_\_\_ (e.g. percent of consumed water)

Initiation: The \_\_\_\_\_ (name of your facility) will recognize that a severe water shortage condition exists when \_\_\_\_\_ (describe triggering criteria).

Termination: Stage 3 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased. Upon termination of Stage 3, Stage 2 or another appropriate Stage, becomes operative.

Water Use Reduction Response Measures (examples):

1. All water use for washing and rinsing of vehicles and other equipment will be stopped unless an alternative water source is used.
2. Reduce pumping from water source as directed by water supplier and/or based on ERCOT requirements.
3. \_\_\_\_\_ (Other measures, as needed.)

**Stage 4 – CRITICAL/EMERGENCY Water Shortage Conditions**

Action: Further curtail consumptive water uses. (example)

Reduction Target: Achieve a \_\_\_\_\_ percent reduction in \_\_\_\_\_ (e.g. percent of consumed water)

Initiation: The \_\_\_\_\_ (name of your facility) will recognize that a critical/emergency water shortage condition exists when \_\_\_\_\_ (describe triggering criteria).

Termination: Stage 4 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased. Upon termination of Stage 4, Stage 3 or another appropriate Stage, becomes operative.

Water Use Reduction Response Measures (examples):

1. Reduce pumping from water source as directed by water supplier and/or based on ERCOT requirements.
2. \_\_\_\_\_ (Other measures, as needed.)

**Section VI: Notification**

Notification of the implementation of any mandatory provision of the Plan shall be made to \_\_\_\_\_ (e.g. water supplier; entity requiring the Plan) \_\_\_\_\_ (method of notification) within \_\_\_\_\_ (number of days) business days of implementation.
